Intelligent self-cleaning cat litter box Petwant

Ref: 5907489608633

Intelligent self-cleaning litter box by Petwant

You no longer have to clean up after your cat by yourself. The intelligent self-cleaning litter box by Petwant will do it for you! The device not only quickly removes waste, but also eliminates odour and bacteria. It is completely safe for pets and works surprisingly quietly. You can control it remotely - using the app. Its dirt tank capacity is 3l - you don't have to empty it every day!

Fast and effective cleaning

The litter box is equipped with a gravity sensor and monitors 24 hours a day whether your cat is using it. This allows it to work surprisingly quickly - enabling effective cleaning in about 30 seconds. It effectively separates clean litter from debris. The litter box filter has 7mm holes, so you can successfully use most types of bentonite litter.

Large capacity dirt tank

You don't have to empty the dirt tank every day. Its capacity is as much as 3l, which means that if you have one cat, you only need to replace the litter bag about once every 5 days. Moreover, you can pour about 3l of litter into the litter box at a time. All this makes the Petwant litter box useful also when you go away for a few days. During this time, your cat can use it freely, and you do not have to worry about it overflowing.

Quiet operation

Despite such a large capacity, the device works surprisingly quietly. Do not worry that the annoying noise will disturb you at night or prevent your child from concentrating on studying. Thanks to the technology used, the litter box does not generate a lot of noise, which means that you, your family and your four-legged friends can rest and sleep peacefully!

Remote operation with app

Conveniently operate your litter box remotely - no need to get up from your chair or walk to another room each time. Just install the dedicated app, which is available for Android and iOS smartphones. The user-friendly software will give you easy access to many useful features. Note: currently the app does not work with 5G network.

Safety of use

Do not worry about your pet's safety. The litter box has 4 weight sensors so that it can effectively detect the presence of pets. Its operation will automatically stop when the cat comes inside and resume once it has gone. Moreover, in case of any abnormalities, you will immediately receive a notification in the app. The device also has a special system that eliminates odor, bacteria and viruses. In addition, the low voltage of 12V protects your pets from electric shock.

Thoughtful design

The diameter of the entrance to the litter box is as large as 30cm - so both small and large cats can easily use it. At the threshold of the device there is a special grid, thanks to which litter falling down from your pet's paws will find its way to the container and not to the floor. The unit also has a built-in LED screen that displays information about its status. The litter box is also very easy to install and clean.
