DDPAI X2S Pro car video recorder

The DDPAI X2S Pro video recorder is equipped with 2 cameras - front and rear, which record video in HD resolution. An intelligent power management system ensures long operating time and allows the device to operate reliably in 24-hour parking monitoring mode. The included remote control button allows you to take a photo or a short video at a glance, while the built-in GPS and accelerometer provide access to route or speed information. Want more? Discover the features available in the DDPAI app!

An invisible guard to protect your car

DDPAI X2S Pro is poised to become a reliable guardian of your car. Its compact size and minimalist design will make it fit perfectly into the interior of any vehicle and remain almost invisible. Its advanced IPS power management system and 2-channel D2SAVE recording technology will provide you with up to 24-hour protection - both when you're driving and when you're parked. In addition, the product has a mute button that you can use to turn off audio recording for privacy while driving.

2 cameras - more recording options

As many as 2 cameras of the device connect to each other via a digital IP connection and give you the ability to record from different perspectives and angles. Both continuously record footage from the moment you start your car. With DDPAI X2S Pro, you'll capture all events - both those unfolding on the road and those inside the vehicle. Freely record richly detailed videos in 1440p resolution - nothing

will escape your attention anymore!

Stunning image quality

The X2S Pro benefits from a number of solutions to optimize image quality. The front camera is equipped with a 140° wide-angle lens with an F1.8 aperture, while the rear camera has a 120° wide-angle lens with an F2.0 aperture. The next-generation HiSilicon processor allows you to achieve professional results, while WDR technology ensures detailed images with vivid, natural colors regardless of lighting conditions. Digital stabilization, geometric distortion correction and anti-fog solutions, among others, are also responsible for exceptional recording quality.

Remote control of the camera

You'll also find a special third-generation button that allows you to operate the camera remotely. Just by pressing it, you can take a stunning photo or a short video of your route in the blink of an eye. The resulting footage will be instantly sent to your phone via Wi-Fi. A magnificent landscape encountered on the road? How about a sudden emergency situation? With DDPAI you'll instantly capture anything of interest!

Comprehensive protection

Ensure the safety of your vehicle in almost any situation - IPS technology makes it possible. Once you start parking monitoring, the camera continuously records in timelapse mode, providing even better images while saving storage space. Note, the memory card is not included, it must be purchased separately. What's more, the built-in accelerometer detects collisions and automatically saves key accident footage, allowing you to avoid accidental loss. You can set its sensitivity in the app. The DVR is also equipped with low-voltage protection.

Precise GPS

The built-in GPS module stands out for its high precision and accurately records driving data, such as location, speed and acceleration, for example. You can save this and much more information and sync it with your smartphone. Download maps, view routes and share the idea of a fantastic trip with your friends!

Check out what the DDPAI app offers

Connect the X2S Pro to the DDPAI app and get access to tons of cool features. Play and edit your footage, then share it on social media - like Facebook or Instagram. Let your friends see cinematic stories about the trips you take! Among other things, the app also sends notifications about the status of your memory card and battery. Note: the live preview is only available on models not exceeding the iPhone 12 PRO MAX due to a lack of updates.
