

Power supply Green Cell PRO 20V 6.75A 135W for Lenovo IdeaPa

Ref: 5903317226697

Power supply Green Cell PRO 20V 6.75A 135W for Lenovo IdeaPad Gaming L340-15 L340-17 15ARH05 15IMH05 Legion Y520 Y530 Y730

Green Cell PRO 20V 6.75A 135W power supply for Lenovo IdeaPad Gaming L340-15 L340-17 15ARH05 15IMH05 Legion Y520 Y530 Y730
The PRO series charger is ideal if your old power supply has failed or you need a second charger for the office, for example. The power supply is distinguished by the highest quality of the components used and thus by its durability and operational safety.

A charger that lasts for years

While most power supplies only last 1-2 years, the Green Cell PRO power supply guarantees more than 3 years of trouble-free operation, even with continuous intensive use. In addition, the safety of the devices being charged is incomparably greater than with standard power supplies.

Functional solutions

Higher quality diodes and transistors ensure a higher maximum operating temperature and higher efficiency. The input voltage of the power supply is additionally filtered and a set of protections ensures overvoltage, short-circuit and thermal protection. The product dissipates heat more efficiently, so the power supply heats up less and wears out more slowly. The power supply is equipped with a durable 1.2m mains cable.

Choose the right model

How do you make sure the power adapter will be suitable for your laptop? This model of Green Cell PRO power adapter is dedicated to Lenovo IdeaPad Gaming L340-15 L340-17 15ARH05 15IMH05 Legion Y520 Y530 Y730 series laptops, but depending on the specific configuration of your computer, the manufacturer may have used a charger with a slightly different wattage or connector type. To ensure that the power supply will be 100% suitable check the relevant parameters.

Compare the values given

You can check the required wattage on the bottom of the laptop, where it is marked as Input e.g. 90W and/or 19V□4.74A. The same values are marked as Output on the power supply attached to the laptop. The wattage value in watts or current value in amperes of the new power supply should not be lower than recommended. However, we can use a higher wattage power supply without any problems - it will be less loaded, so it will heat up less. The voltage may differ by a maximum of ±1V from the manufacturer's recommended

Fresh energy for your laptop

Opting for longer-lasting equipment not only saves you money, but also takes care of the environment. Your favourite laptop will get a new lease of life and we will take care of the recycling. We finance activities that promote and support the recovery and recycling of used electronic equipment.
