

Smart Wireless Wall Switch Sonoff T2EU2C-RF 433MHz (2-channel)

Ref: 6920075776263

Smart Wireless Wall Switch Sonoff T2EU2C-RF 433MHz (2-channel)

Smart wireless wall switch Sonoff T2EU2C-RF 433MHz (2-channel)

The Sonoff switch has two channels and features a modern design and wireless operation. The possibility of remote control increases the comfort of use.

Control through the App

For convenience, you can control the switch using the eWeLink app, which is compatible with Android or iOS. The switch also supports voice functionality with Amazon Alexa and Google Assistant. With this solution, you don't even have to get up from the couch to turn off the lights. The switch accepts the 433MHz RF protocol, which is compatible with partial Sonoff devices, so you can use it as a remote control.

Schedule function

The Sonoff switch has a schedule function where you decide when the lights go on or off. The T2EU2C also works with Sonoff TX wall switches, which allow you to control the light from two different positions without wiring. You can also control the lights in a few rooms via switch.

Modern design

The switch has a simple design, so it will fit into any modern interior. The glass panel is scratch resistant and the buttons illuminate blue to help you locate them at night. The brightness of the buttons changes depending on the amount of light in the room. Depending on your needs, you can mount the Sonoff switch in 3 ways. You can, for example, stick it to the wall, screw it on the wall or attach it to your desk.
