

Uninterruptible power supply UPS Green Cell AiO 800VA 480W

Ref: 5902701419738

Uninterruptible power supply UPS Green Cell AiO 800VA 480W

Green Cell AiO UPS 800VA 480W uninterruptible power supply.

An uninterruptible power supply (UPS) is a device designed to provide power when our home or workplace runs out of electricity. A sudden outage can cause not only the loss of important data, but also damage to electronic equipment. With an uninterruptible power supply, we will have time to save the results of our work and safely shut down the device. The UPS is able to take over the role of the power outlet and maintain power even in the event of large and prolonged voltage fluctuations. When there is current in the outlet, the UPS accumulates energy in the battery, providing connected devices with adequate surge protection.

Always in control

To take advantage of all the functions of the Green Cell UPS, dedicated software has been created to allow advanced management of the device. The application guarantees simple and intuitive operation so that using it will not bring the slightest problems. The program provides a real-time view of measurement data, including input and output voltages, UPS load frequency, device temperature and battery capacity. Program automatic system shutdown, set notifications and email alerts when switching to battery power. You can explore these and many more features by downloading special software.

With attention to detail

When designing UPSs, we took care of every aspect. Combining maximum functionality with a unique design, we have created a device

that will look great, blending into any environment. What's more, in order to make using the UPS as convenient as possible, we equipped it with an easy-to-read LCD display, which informs you about many important parameters for the operation of the power supply.

Type of UPS

Line-interactive AVR UPSs are an improved version of the offline power supply. They are equipped with an automatic voltage stabilizer, which not only protects against power outages, but also against disturbances in the network. These power supplies guarantee the complete safety of any equipment plugged into the UPS.

High efficiency

Power informs how many and what devices the power supply is able to supply with current. To meet the requirements of users, Green Cell UPSs are equipped with the highest quality AGM batteries, which achieve a life span of more than 5 years of operation, thus ensuring the best efficiency. To ensure that the UPS fully performs its task, you should choose a model whose power exceeds the total power of the devices connected to it.

Extremely low switching time

It is the switching time that determines how quickly the UPS, will respond in the event of a power failure. The lower its value, the better the UPS. Green Cell Power Proof uninterruptible power supplies guarantee the lowest switching times, so they respond instantly to power outages ensuring complete security for your documents and devices.

Manufacturer

Green Cell

Model

UPS07

Power

480 W

Apparent power

600VA - 999VA

Input frequency

50/60 Hz

Output frequency

50Hz or 60Hz (automatic detection)

Input voltage

220/230/240 V

Output voltage

230 V

Typical charging time

6-8 hours

Surge protection

RJ45 (100Mb/s)

Protection

Thermal, surge, short-circuit protection

Sockets

6x Schuko (3x battery backup + 3x outlets with surge protection)

Communication

USB

Indicator

LCD

Response time

□2-6 ms
□Battery
□1x 12V/9Ah
□Dimensions
□270 x 190 x 92 mm
□Weight
□4.9 kg
