Smart food dispenser CatLink FRESH2 Luxury

Intelligent CatLink FRESH2 Luxury Pet Feeder

The intelligent CatLink FRESH2 Luxury feeder ensures constant access to fresh food with a reliable mechanism that prevents clogging. The device is designed to recognize multiple cats and provides food even without access to the network. Advanced sealing protects food from moisture, and the 4-liter container allows for the storage of a large amount of food. Easy cleaning and maintenance make the device an ideal solution for every cat owner. Additionally, the app allows for monitoring pet health data.

Your Reliable Feeding Assistant

With CatLink FRESH2 Luxury, you can be sure that your pet will never go hungry, even when you are not around. The device automatically replenishes food when it drops below 10 grams. Based on your cat's feeding habits, you can customize the feeding schedule and portion size to perfectly match your pet's needs.

Anti-Clogging Mechanism

Thanks to a wide opening and an automatic rotating system that prevents blockages, the CatLink FRESH2 Luxury feeder reliably serves meals to your cat. It is designed to dispense pellets up to 16 mm in size, including expanded, freeze-dried, air-dried, and baked foods. The mobile app will notify you of any irregularities.

Two Power Options

You don't have to worry about power outages or internet problems – the CatLink FRESH2 Luxury feeder can work offline, ensuring your pet gets its meal on time. To provide your cat with constant access to food, equip the device with 4 AA batteries (not included), which guarantee up to 2 weeks of reliable operation in households with only one cat. Additionally, the cord is bite-resistant, minimizing the risk of malfunctions or damage.

Caring for Your Cat's Health

The CatLink FRESH2 Luxury feeder uses a patented algorithm to monitor your cat's feeding habits. An infrared sensor detects the presence of your four-legged friend, and a gravity sensor registers every gram of consumed food. Based on this information, reports are generated, containing an assessment of your pet's health. Collected data and alerts about potential issues are available in the dedicated app. From there, you can also create feeding schedules and check alerts about low food levels in the container.

Designed for Multiple Cats

Taking care of more than one cat? The CatLink FRESH2 Luxury feeder stands out with its revolutionary algorithm for recognizing multiple cats and a patented certificate. When combined with CATLINK RFID collars, it guarantees that each cat receives a meal tailored to its needs. Additionally, a special barrier prevents greedy eating and conflicts, ensuring that every animal is well-fed.

Freshness with Every Bite

The CatLink feeder has a capacity of up to 4 liters, allowing it to store up to 2 kg of food. This is enough to provide food for an adult cat for 20 days. An innovative silicone seal isolates the food from air and moisture, preventing access to insects and mold formation. Automatic closing of the opening prevents insects from accessing the food after it's dispensed, and the built-in desiccant container further helps maintain food freshness. Additionally, the bowl's inclination angle (7°) makes it easier for pets to have their meals. As a result, using FRESH2 Luxury will always be a comfortable experience for animals.

Additional Features

Mounting, disassembly, and cleaning of the FRESH2 Luxury feeder are smooth and trouble-free. Individual elements can be washed with running water to ensure the highest hygiene and health standards for your cat. The ceramic bowl is made from food-grade materials, making it safe for animals. The device also features childproofing, which can be configured in the app to prevent accidental activation. Another advantage is automatic OTA updates, ensuring that the feeder always operates with the latest software.
