DDPAI X5 Pro Dash Camera

The DDPAI X5 Pro dash camera provides excellent image quality in up to 4K resolution and can record dynamic 1080p/90FPS video. It is equipped with an advanced navigation system and supports high-speed 5GHz Wi-Fi. It also offers a special parking mode so you can keep your car safe even around the clock. It allows you to store files on an eMMC disk (32GB) or on a TF card with a capacity of up to 128GB (not included). As many as 2 cameras allow you to record both front and rear.

Fantastic image quality

The camera is equipped with a Sony IMX415 sensor, which in combination with 7 lenses and F1.8 aperture provides a rich in detail, clear, crisp image. With its help you can record excellent quality video 3840x2160p / 30FPS. Thanks to Realcube technology, videos are bright, sharp and impress with vivid, natural colors. The device also offers NightVIS technology, which allows you to get high-quality images even in low light. It is also possible to record smooth 1080p/90FPS footage - without motion blur.

Record from the front and rear

X5 Pro allows you to record from the front and rear of your vehicle simultaneously. This ensures that you don't miss any event. The

2160p 4K front camera will record everything in front of you and provide clear, richly detailed images. The 1080p rear camera can come in handy in the event of a rear-end collision or parking lot collision. It will help to determine the possible culprit and get compensation.

2 file storage options

Don't worry about running out of file storage space and losing some important footage. The video recorder is equipped with a 32GB eMMC drive. It is also compatible with TF cards of up to 128GB. What's more, the most important recordings are saved to the disk, regardless of whether you use the additional memory or not. With this solution, your crucial footage is always safe!

Advanced GPS

X5 Pro offers an advanced navigation system that uses solutions such as GPS, BDS, GLONASS and Galileo. Its positioning update rate reaches 5+ Hz (about 5 times per second). This makes it stand out for its extremely high accuracy. What's more, the built-in GPS, 6-axis gyroscope and G-sensor allow you to use the Sense Reality (SR) effect to create spectacular travel footage. Feel like a rally driver and enjoy a unique and exciting driving experience!

Parking mode

Keep your car safe even 24 hours a day. The camera offers a special parking mode where it continuously monitors what's happening in the front and rear of the vehicle (wide-angle monitoring, rear: 125°, front: 140°). When the vehicle is parked, the X5 Pro records Timelapse to capture as much as possible. If the device detects a collision, it will automatically save the relevant part of the recording. The device also stands out for its low power consumption and allows you to check the voltage via the app. All this makes it able to work reliably for a long time.

Even more safety features

You can drive safely with DDPAI. The X5 Pro dash camera offers an advanced Driver Assistance system that monitors the traffic situation and notifies you of collisions or the presence of pedestrians, among other things. The camera also has a 6-axis G-sensor to detect sudden bumps and shocks. If an accident occurs, it will automatically record a 10-second video and save it in a separate folder. Such a video can come in handy if you apply for compensation or insurance money.

Built-in capacitor

The X5 Pro uses a high-grade capacitor rather than a regular battery to power the X5 Pro. This allows you to enjoy greater safety of use. The applied solution makes it possible to use the camera in temperatures from -20°C to 65°C. The dash camera will not overheat and its lifetime has been significantly extended. What is more, the capacitor allows you to record for the last 3-4 seconds even after turning off the camera. This ensures that you don't miss anything important!

DDPAI App

Download the DDPAI app and gain access to many more features. Not only can you remotely adjust camera parameters, but you can also save and edit recorded footage and share it on social media such as Facebook, Instagram or TikTok. The available filters, effects and music will allow you to enhance your videos and make them unique. The X5 Pro supports high-speed 5G Wi-Fi for lightning-fast downloads and low latency.
