

## Bike Phone Holder Joyroom JR-ZS360 (Black)

Bike Phone Holder Joyroom JR-ZS360 (Black)

Ref: 6941237108173

Joyroom JR-ZS360 bike mount for phones (black).

The JR-ZS360 is a bike mount for your phone with a sturdy design that provides a stable, secure grip on your device so you can enjoy your ride without any worries. The extendable holder fits devices between 4.7 and 6.8 inches, which meets the size standards of most phones manufactured today. The holder is equipped with a size-adjustable clamp, as well as a sturdy ball-and-socket joint that allows you to position your phone at a convenient angle. What's more, the holder has a visible safety lock so you can make sure your device is securely locked in the holder at any time - no need to stop.

### Versatility

One of the key features of this mount is its versatility. The extendable mechanism allows it to fit phones with screen sizes from 4.7 to 6.8 inches. As a result, you can rest assured that most of today's smartphones will easily fit in the mount. Whether you have a compact model or a larger flagship phone, the JR-ZS360 will provide secure and stable support. The mount is equipped with an adjustable size clamp, allowing you to precisely adjust the mount to the dimensions of your device. This is especially important because it not only provides a more secure grip, but also minimizes vibration and shaking that could affect the comfort of the phone while driving.

### Rugged design

Sliding over bumps or potholes on a bike trail can challenge the stability of the mount. That's where the sturdy ball joint comes in, which

allows you to adjust the angle of your phone. This allows you to adjust the screen to your preference for optimal visibility even in difficult conditions.

#### Safety lock

Safety is a priority when cycling, which is why the JR-ZS360 is equipped with a visible safety lock. It's a simple but effective mechanism that allows you to check at any time whether the device is properly locked. This way you don't have to interrupt your route to make sure your phone is safe. This is especially important during intense or demanding routes.
