

Enclosure SDD M.2 Orico, NVME, USB-C 3.1 Gen.2, 10Gbps (blac

Enclosure SDD M.2 Orico, NVME, USB-C 3.1 Gen.2, 10Gbps (blac

Ref: 6936761875868

Orico M.2 SSD Enclosure

The Orico compact M.2 SSD hard drive enclosure is child's play to install and extremely durable. It enables data transfer speeds of up to 10Gbps and supports capacities up to 2TB. It also stands out for its wide compatibility. Lightweight and handy - you can always have it on hand. The transparent case is convenient to use and makes it much easier to identify the drive inside.

Even faster data transfer

The advanced JMS583 chip is responsible for the reliable performance of the device. Combined with the second-generation USB 3.1 interface, UASP support and Trim protocol, it provides lightning-fast data transfer speeds of up to 10Gbps. Now it only takes 1 second to transfer 1GB of files! Measured read and write speeds of up to 992MB/s - no more waiting forever for your photos, documents or videos to be copied.

Wide compatibility

The enclosure is compatible with many M.2 NVMe SSD standards. You can also successfully connect it to a multitude of devices - not only to your computer or laptop, but also, for example, to your smartphone. The product works with equipment from most well-known manufacturers, such as Apple, Huawei, Lenovo, ASUS, Razer, Samsung and Xiaomi, among others.

Practical and stylish

The product is designed to be both functional and aesthetically pleasing. The transparent casing allows you to quickly identify the drive inside, and the polychrome aluminum alloy not only protects it from damage, but also looks great. A built-in LED indicator will let you know the status of the device.

Care for long hard drive life

Enjoy the performance of your SSD for a long time. Using a range of smart technologies, the enclosure automatically goes into sleep mode after 10 minutes of inactivity. What does this mean? This practical solution helps to reduce power consumption and hard drive operation, thereby extending its lifespan.

Small size - huge possibilities

The chassis supports SSDs up to 2TB. So you can be sure that you will not run out of space to store photos, videos, documents and other files. Such great capabilities of the product go hand in hand with its small size and light weight of 39g. The case is so compact and handy that you can easily fit it in your purse, backpack, or even in your pocket and take it with you wherever you want.

Effective heat dissipation

Forget about your hardware overheating problems. The product is equipped with a triple heat dissipation system consisting of double-sided porous copper bars, a thin aluminum case and silicone pads. All this ensures fast, efficient cooling and allows you to avoid hard drive damage.

2 different cables included

The set includes 2 practical cables - USB-C to USB-C (10Gbps) and USB-C to USB-A (5Gbps). With their help you can easily connect the case to the equipment of your choice - both to your computer and to your smartphone. So you can, for example, enjoy dynamic gaming or transfer files in no time - almost nothing limits you!

In the box

SSD enclosure

Screwdriver

USB-C to USB-A cable

USB-C to USB-C cable

Silicone

Screws

Brand

Orico

Model

TCM2-C3-BK-BP

Color

Black

Material

Transparent PC + aluminum alloy

Output Interface

USB 3.1 type C

Chip

JMS583 (10Gbps)

Transmission Speed

Up to 10Gbps

Dimensions

108x34x11.5mm

Weight

39g

Supported Capacity

Up to 2TB

Systems supported

Windows, Mac OS, Linux

SSD Supported

M.2, NVMe, M key, 22x30 / 22 x 42 / 22 x 60 / 22 x 80

Preço:

€ 30.00
