

Wi-Fi Smart Switch Meross MSS710-UN (Non-HomeKit)

Ref: 0619317769762

Wi-Fi Smart Switch Meross MSS710-UN (Non-HomeKit)

Meross MSS710-UN Smart Wi-Fi Switch (Non-HomeKit)

Managing your smart home has never been easier. The Wi-Fi switch from Meross makes it easy to control paired devices remotely - via an app or voice commands. The device is compatible with Amazon Alexa and Google Assistant, among others. You only need an existing Wi-Fi network for it to work properly - you don't need any additional hubs.

Operate your devices remotely

Gain the ability to remotely control devices such as lamps, fans or heaters. The Meross app allows you, among other things, to conveniently switch on and off the equipment paired with the switch remotely, as well as check its status. The product is also compatible with Samsung SmartThings, Amazon Alexa and Google Assistant. You can also control it by voice, for example with the Siri smart assistant.

Create work schedules and timers

Adapt the operation of your devices to your schedule. Using the app, you can create work schedules for the appliances connected to the switch. Make the lights automatically turn on at 7am when you get up and off at 11pm when you go to bed. There is also the option to set timers - use this if you want the selected appliance to turn itself off after a set time. A sunrise / sunset function is also available.

User-friendly

Mounting and configuring the switch will not cause you any problems. You don't need to buy additional hubs either - all you need is a working Wi-Fi network. The device is also safe to use. It is equipped with an overload protection circuit and its casing is made of robust, fire-resistant plastic. All of this ensures that the switch will serve you well for a long time.
