Intelligent self-cleaning cat litterbox Catlink Scooper Young Version

Intelligent CatLink Scooper Self-Cleaning Cat Litter Box (Young)

You no longer have to clean up after your cat by yourself! The intelligent litter box by CatLink is equipped with a 13-liter waste box and allows automatic cleaning in just about 200 seconds. It offers 2 modes of operation and is designed to keep your cat safe. It also avoids the problem of unpleasant odors. It also stands out with its sleek, modern design and relatively small size. It is suitable for cats weighing 1.5-10kg. In the set you will also find a roll of garbage bags for the litter box.

2 modes to choose from

Adjust the operation of the litter box to suit your needs. The device offers 2 modes of operation. In Auto mode, cleaning starts automatically 5 minutes after your cat has used the litter box (only when your pet has gone). If you prefer to decide for yourself when the litter box should start working, choose Manual mode. Once you do, you can press the button at any time to start cleaning.

Spacious waste box

The capacity of the waste box is as much as 13l, which is enough for up to 14 days of use by one cat or about 7 days for 2-3 cats. Thanks to this you don't have to clean the litter box every day anymore, you can also go on a trip for a few days without any worries. The waste box is located at the front of the device, which makes emptying it much easier. Simply remove the drawer, discard the old litter bag, and then insert a new one.

Fast cleaning - easy litter replacement

The litter box is also perfect for those homes where more cats live. It can be cleaned in just about 200 seconds, which means no pet has to wait too long to use it. Changing the litter is also child's play and quick. Simply empty the litter box by pressing the button, then pour in fresh litter so that the level does not exceed the line visible inside the unit.

Get rid of bad smell

The intelligent litter box by CatLink will also allow you to forget about the bad smell. The device is highly sealed, which effectively prevents the spread of odor. It is also equipped with a filter made of activated carbon and polymer, which traps and absorbs particles responsible for the formation of unpleasant odors.

For the safety of your pet

Don't worry about your cat's safety. The device is equipped with precise sensors that detect the presence of animals with a minimum weight of 1.5kg. This means that if your pet enters the litter box at the slightest, it will automatically stop working and resume when the pet goes away. What's more, an additional sensor protects your cat from a possible pinch. The litter box is also designed to eliminate the risk of the dirt container tipping over.

Thoughtful design

The device is distinguished by a modern design, thanks to which it will perfectly complement any room and will not interfere with its arrangement. It also does not take up too much space in the apartment. It takes up only 0.3m², providing enough space for pets using it. The litter box is made of high-quality polypropylene, and it can be easily disassembled, cleaned, and then reassembled if necessary. Notice: do not wash the base of the unit.
