Joyroom JR-ZS366-W magnetic car mount for cockpit/air vents (black)

The Joyroom mount will find the perfect place in your car, regardless of the model you drive every day. Made of high-quality materials, it provides solid support for your phone on the cockpit or air vents. With its solid magnet, it works with 12/13/14 series iPhones and MagSafe-enabled cases. The metal puck you will find in the package will allow you to extend the functionality of the mount so that you can freely use it with other smartphone models.

**Powerful magnet strength**

The innovative arrangement of magnets in the Joyroom JR-ZS356 holder attracts the device with tremendous force, so that the phone is held firmly even when driving over uneven surfaces. The strong hold does not affect the functionality of the device - you can freely use navigation and manage music to make your trip more pleasant. What's more, thanks to the handle's rotatability, you will successfully position your phone in the right position for you.

**Created with convenience in mind**

The compact size of the holder means that it does not block the air vents or the driver's view. This ensures that you have unobstructed driving access and excellent visibility of the road. The mount is hassle-free to install and remove, so you can change its position according to your current needs.
