

Cage PGYTECH for Ryze Tello (P-WJ-001)

Cage PGYTECH for Ryze Tello (P-WJ-001)

Ref: 6970801334113

360° of protection

Designed specifically for RYZE Tello, the protective cage guarantees excellent fun with complete safety. The use of the cage not only protects against mechanical damage to the equipment, but most importantly allows you to fly near people, buildings or trees.

Be always ready to take off

The use of a protective cage is excellent when performing various types of aerobatics as well as races. Perfectly protected propellers and housing will not be damaged during a collision in flight or when hitting the ground. The cage is designed to distribute the impact energy evenly and return to the flight position when the cage canopy falls to the ground.

Robust construction

The cage was made of PP-type polymer material, which provided excellent strength and high flexibility. This combination provides high resilience on impact. With a weight of only 13 grams, the protective cage does not adversely affect the performance or capabilities of the RYZE Tello. Its design, thanks to its open structure, hardly causes aerodynamic drag, and thus does not cause more energy consumption.
