Ref: 6936069203844

Slim Filter 40,5 MM K&F Concept KV32

Filtr Slim K&F Concept KV32 is a product created with photography enthusiasts in mind, looking for excellent quality tools that will allow them to achieve exciting and professional effects. This filter is unique due to a number of features that will enhance the quality and precision of your photographs. See what it can offer you!

#### High Quality Materials

The Slim Filter K&F Concept KV32 is a product that is characterized by the high quality of materials used in its production. Made of optical glass, it ensures the highest level of light transmission, resulting in extremely clear and sharp photos. It is worth noting that the used metal sealing ring instead of a plastic one ensures better tightness, protecting the filter from accidental falls or loosening.

#### Excellent Image Quality

One of the key assets of the Slim Filter K&F Concept KV32 is its ability to provide high-resolution images with excellent sharpness. This is thanks to 8-layer nanometric coatings that reduce the effects of reflections, light flare, and chromatic aberrations. As a result, photographers can be sure that their photos will be saturated with colors and full of details.

#### Convenient Adjustment

This filter also offers convenient adjustment, allowing exposure to be adjusted to changing lighting conditions. Thanks to 9 levels of regulation, ranging from ND2 to ND400, users can easily control the amount of light passing through the lens, which is extremely useful when shooting in bright light or with long exposure times.
