

SwitchBot Motion Sensor

SwitchBot Motion Sensor

Ref: 850007706371

SwitchBot Motion Sensor

The SwitchBot Motion Sensor is a device that automatically detects motion and changes in brightness, enabling automation of your devices, enhancing home security, and saving energy in your smart home. With notifications, you can always have peace of mind knowing that your home is constantly protected. Voice assistant support further enhances convenience.

Your Home Ready to Welcome You

The SwitchBot Motion Sensor allows you to enjoy a cozy atmosphere as soon as you enter your home. If you place it near the entrance, it will automatically turn on lights, humidifiers, fans, air conditioning, or other smart devices. If you place it under the bed, in the hallway, near the bathroom entrance, or in the kitchen, it will automatically turn on the lights when you get out of bed at night to go to the kitchen or bathroom. This enhances your sense of security and comfort in the dark.

Security Concerns

By using the SwitchBot Motion Sensor in conjunction with the SwitchBot Hub Mini and SwitchBot Indoor Cam, you can create a surveillance and monitoring system in your home. It is recommended to place the sensor at the entrance or in any location where a break-in attempt might occur. Meanwhile, the SwitchBot Indoor Cam, mounted on the ceiling or a high place, monitors the target area. When the sensor detects motion, the SwitchBot Indoor Cam will automatically activate and start recording.

Create a SwitchBot Ecosystem

The SwitchBot Motion Sensor can connect with other SwitchBot smart home products, creating home automation. Local automations can be created using SwitchBot Bot and SwitchBot Curtain. After configuring it with the SwitchBot Hub Mini, you can integrate it with various third-party services, enjoy voice control, and remote control via smart speakers and smartphones.

Intelligent Motion and Brightness Detection

The SwitchBot Motion Sensor is equipped with an advanced PIR sensor to detect human motion up to 9 meters away and a light sensor to determine whether human activity is occurring during the day or night. Its range is 110° horizontally and 55° vertically. This ensures precise operation and adapts to lighting conditions. Worried about false alarms? You can adjust the motion sensitivity to avoid this issue!

Practical Notifications

When the SwitchBot Motion Sensor detects motion or changes in brightness, you will receive appropriate notifications. This allows you to conveniently check what's happening in your home - all you need is a smartphone with the installed app. Additionally, all events detected by the device will be recorded and synchronized with your phone. Note: SwitchBot Hub Mini is required for configuration.

Seamless Integration with Voice Assistants

Thanks to integration with voice assistants like Alexa and Google Assistant, controlling your home becomes even simpler! You can control devices by voice and create personalized scenes tailored to your needs. You will also be notified of motion detection by Alexa, ensuring that any unwelcome guests do not go unnoticed, even during your nighttime rest. Note: SwitchBot Hub Mini is required for use.

Long Battery Life

The SwitchBot Motion Sensor is designed for efficiency and energy savings. One sensor operates for about 3 years on just two AAA batteries, resulting in minimal operating costs.

Easy Installation

With its magnetic base, you can mount the SwitchBot Motion Sensor anywhere in your home - in the hallway, on the ceiling, wall, shelf, door, refrigerator, or under the bed. The choice is yours!

□Manufacturer

□SwitchBot

□Model

□W1101500

□Dimensions

□Motion sensor: 54 x 54 x 30 mm; Base: 45 x 45 x 32 mm

□Weight

□Motion sensor with batteries: 56 g; Base: 19 g

□Power and Battery Life

□2 AAA batteries, typically 3 years, triggered 120 times by motion, 40 times by light detection, and 20 times by local scenes at temperatures below 25°C on an everyday basis

□Operating Temperature

□From 10°C to 60°C

□Operating Humidity

□From 20% to 85% RH

□Range

□9 m (max), 110° horizontally and 55° vertically
