## SwitchBot Contact Sensor

Ref: 850007706388

SwitchBot Contact Sensor

**SwitchBot Contact Sensor for Window/Door Opening**

The SwitchBot Contact Sensor is an innovative component of a smart home system that provides security and convenience by monitoring doors and windows. After integrating it with the SwitchBot app, you can receive notifications about registered events directly on your smartphone, giving you control over your home from anywhere, at any time. Installing the device is efficient and trouble-free, and compatibility with popular voice assistants enhances usability.

**Entry and Exit Monitoring**

With the SwitchBot sensor, you can precisely monitor movement around the entry and internal doors. The device detects when residents leave the house and when they approach, allowing for automatic activation or deactivation of electrical devices based on their presence. The detection range is up to 5 meters (90° horizontally and 55° vertically). This optimizes energy consumption and increases security by alerting you to unexpected entries or exits – including unwanted individuals.

**More with the App**

When connected to the SwitchBot app and the SwitchBot Hub Mini, you will receive smartphone notifications for every event, such as window or door openings. The ability to check your home's status from anywhere provides control and peace of mind, especially for families with children or pets.

## Voice Control

After configuring it with the SwitchBot Hub Mini, the sensor offers integration with various external services. This allows you to enjoy voice control and remote control through a smart speaker and smartphone. Voice assistants like Alexa or Google Home inform you about every door or window opening, and additional features like light and motion sensors are available through IFTTT.

## Automation for Your Comfort

You can configure the Contact Sensor to work with other SwitchBot devices, creating automation scenarios – for example, closing curtains in windows or turning on lights when a door is detected open. This intelligent solution adapts the environment to your needs, not only increasing comfort but also enhancing the energy efficiency of your home.

## Universal Application

The easy-to-install and use Contact Sensor can be easily placed on any type of door or window. Its universal nature allows placement in various areas of the home – from the main entrance, through room doors, to balcony windows, cabinets with important documents, or even a pet's cage.

## Durable and Reliable

The sensor requires 2 AAA batteries for power, providing up to 3 years of operation. Moreover, its resistance to a wide range of temperatures (from -10°C to 60°C) ensures the device's reliability in almost any conditions.

Included in the Package:
Window/Door Opening Sensor
Magnet
AAA Batteries x2
Screw Set
Sticker (attached to the sensor)
Sticker (attached to the magnet)
User Manual
Manufacturer
SwitchBot
Model
W1201500
Dimensions
70.5 x 25.5 x 23 mm (contact sensor); 35 x 12 x 12.5 mm (magnet)
Weight
43 g (contact sensor with batteries); 13 g (magnet)
Battery Power and Lifespan
2 AAA batteries, typically 3 years, triggered 80 times by door openings, 80 times by door closings, 40 button presses, 40 light detections, and 20 local scenes below 25°C daily
Operating Humidity
From 20 to 85%RH
Operating Temperature
From -10°C to 60°C
Detection Range
Up to 5 meters
Maximum Detection Angle
90° horizontally and 55° vertically
