Esperanza TM105K Titanium Wireless mouse (black)

Esperanza TM105K Titanium Wireless Mouse (black)

The Esperanza TM105K Titanium Wireless Mouse is a great choice for desktop and notebook users looking for a combination of comfort, performance and durability. Equipped with advanced 2.4GHz technology, this mouse offers an exceptional working range of up to 10m, providing freedom of movement without the constraints of cables. The variable working resolution (800/1200/1600 DPI) allows you to fine-tune the sensitivity to your needs, which is especially useful for a variety of applications and games. The lightweight and ergonomic design, enhanced by a quiet scroll wheel and high-quality plastic, ensures comfortable use for long hours.

2.4GHz wireless technology

One of the key features of the Esperanza TM105K mouse is its 2.4GHz wireless connectivity, which guarantees a reliable connection and an impressive range of up to 10 meters. This allows users to enjoy freedom of movement without the constraints of wires, which is invaluable for office work, presentations or entertainment media at home. In addition, the NANO's small, hard-to-accidentally damage receiver is easy to transport and saves space, making the mouse ideal for frequent travelers.

Resolution and precision

Another important feature of the mouse is the ability to change the working resolution (800 / 1200 / 1600 DPI), which allows users to adjust the sensitivity of the mouse to the tasks at hand. This feature is particularly useful for gamers and professionals working in

applications that require precise cursor movement, such as graphics or editing programs. The flexibility in resolution ensures that the mouse will perform well in any working conditions.

Ergonomics and comfort of use

The Esperanza TM105K was designed with ergonomics and comfort in mind. Its shape fits perfectly in the hand, preventing fatigue even after many hours of work. Two additional side buttons ("Next" and "Previous") make it easy to navigate web browsers and other applications, which is a big help, especially during intensive work. The mouse is also lightweight (weighing only 60g) and compact in size (100mm x 60mm x 36mm), adding to the user experience.
