

## DJI Ronin 4D Flex

DJI Ronin 4D Flex

DJI Ronin 4D Flex

The Ronin 4D ushered in a new era of filmmaking and continues to offer further exciting possibilities. Meet the DJI Ronin 4D Flex - an innovative, expandable solution that was created to give filmmakers even more freedom. With it, the main module of the Ronin 4D can be separated from the camera with the gimbal. This makes it possible to store the recording module, power supply and video transmission systems in a bag or backpack, while the operator only has to hold the camera in his hands - this significantly reduces the weight of the entire setup. More flexibility, high performance and a unique creative experience - the Ronin 4D Flex opens a new chapter in cinematography.

### Lightweight design

Enjoy greater comfort while working. Ronin 4D Flex will allow you to reduce the weight of the equipment you hold in your hand to 1.8kg, which is only about 34% of the original weight. It is therefore ideal for cinematographers who often work on projects that require prolonged recording. The device is especially ideal for shooting documentaries, interviews or events - anywhere where high mobility is required. The ultra-light Ronin 4D Flex is distinguished by both its portable design and high performance, so it can meet even the most demanding expectations.

#### Get more flexibility

The long 2m extension cable will give you much greater flexibility when working. It allows you to effortlessly perform complex camera movements - even in tight spaces, such as inside vehicles. The Ronin 4D Flex also allows you to use the camera with the X9 gimbal as a small remote head. Now you can effortlessly prepare a tracking shot and more - DJI gives you plenty of creative possibilities!

#### Ultra-thin coaxial cable

The Ronin 4D Flex extension system uses an ultra-thin coaxial cable that supports lossless transmission of high-speed signals captured by the camera sensor (up to 8K). It also allows reliable transmission of control and monitoring signals. The cable is also very robust and flexible - even repeated bending will not intimidate it. This makes it perfect for a variety of scenarios!

#### Focus on versatility

The Ronin 4D Flex is natively compatible with Ronin 4D Hand Grips and the main monitor, so it can act as a lightweight and compact, yet powerful, standalone tool. The product offers cinematographers a whole suite of useful features, including cinematic 8K imaging, 3-axis stabilisation, LiDAR sharpening and a professional monitoring and control system. As a result, it provides a comfortable and efficient creative experience that is currently unrivalled in the industry. What's more, switching between Ronin 4D Flex and the integrated setup is extremely easy and fast - it doesn't even require any tools.

#### Multiple configuration options

Opt for additional accessories and get even more options when recording. Ronin 4D Flex allows you to freely use a variety of extension rods and remote heads. So it's easy to get the results you want! You can also make your work easier by transporting heavier equipment in a backpack or mounting it on a special waistcoat. With DJI, recording complex shots doesn't have to require a lot of effort!

#### Lens compatibility

For static shots, the Ronin 4D Flex allows you to mount a standard Pan Axis Quick-Lock with accessories, pushing the limits of the device's lifting capacity. This means you can use a variety of telephoto lenses - for example the FE 70-200 mm F2.8 GM or the FE 200-600 mm F5.6-6.3 G. But it doesn't stop there! Some third-party accessories and focus motors allow you to install lenses such as the Zeiss SP or Cooke Anamorphic/i.

#### In the box

Ronin 4D Flex

Pan Axis Quick-Lock

Ronin 4D Hand Grips Adapter x2

Adapter cable for Hand Grips x2

#### Specification:

Brand

DJI

Model

DJI Ronin 4D Flex

Extension cable length

2m

Weight

Approx. 725g (including Ronin 4D Hand Grips adapters and Hand Grips adapter cables)

Compatibility

DJI Ronin 4D

Supported accessories

Ronin 4D Hand Grips, High-Bright Main Monitor, LiDAR rangefinder, Zenmuse X9 focus motor
