Electronic Baby Monitor Lollipop (Turquoise) CABC-LOL03EUCY01

The Lollipop electronic nanny model CABC-LOL03EUCY01 is an innovative solution for parents who want to provide their child with maximum safety and comfort, while enjoying the convenience of remote monitoring. Offering images in stunning FullHD (1080p) quality at 30 frames per second (including at night), and with a dedicated app for unlimited streaming from multiple cameras, two-way communication, automatic notifications of important events, monitoring of baby's health, and a free 7-day trial period for sleep monitoring, Lollipop offers comprehensive support for baby care. It's a device that not only allows continuous observation, but also interaction with the child, providing peace of mind for all parents. The camera's flexible design is an added bonus, allowing you to place it in non-obvious places, such as the crib rungs or your little one's favorite mascot. This gives you a new perspective and the ability to watch your baby up close when you can't be next to him!

Unlimited Streaming from Multiple Cameras

Thanks to the dedicated app, the Lollipop electronic baby monitor offers the ability to unlimitedly stream video from any number of cameras, allowing parents to monitor every corner of the house. This feature is invaluable when there is more than one child at home or when you want to have a view of different rooms. It makes time management easier and increases monitoring efficiency, providing a fuller picture of the situation at home.

Two-Way Communication

Two-way communication is a key feature that allows not only hearing every sound in the child's room but also enables the child to hear the parent's voice. This functionality transforms the electronic baby monitor into a true interactive care tool, allowing parents to soothe the child with lullabies or white noise even when the parent is elsewhere. This significantly enhances the child's comfort and peace of mind for the parent.

Automatic Notifications

The device sends automatic notifications to the parent's phone in case of crying, attempts to exit the crib, noise, changes in temperature, humidity, or air quality in the room. This allows parents to immediately respond to the child's needs and potential dangers, providing an additional layer of safety and peace of mind.

Health Monitoring

The innovation of the Lollipop baby monitor is also reflected in monitoring the child's health without the need for additional devices. The app provides access to history and charts related to blood pressure, heart rate, or sleep quality, which is extremely useful for tracking the overall health of the child and identifying potential health issues at an early stage.

7-Day Free Trial

Offering a 7-day free trial for child sleep monitoring is a significant convenience that allows parents to track their child's sleep patterns, activities, or moments when the child was out of the camera's range. This feature is especially valuable for new parents who are learning to recognize and adjust to their child's needs.

Manufacturer
Lollipop
Model
CABC-LOL03EUCY01
