Artie 3000 Learning Resources EI-1125

Ref: 5906168432880

Artie 3000 EI-1125 coding learning robot

Give your child a toy that will not only bring him a lot of fun, but also allow him to learn something new and develop his creativity. The Artie 3000 robot makes it easy to learn coding - by programming it through an easy-to-use website, little users can make it draw different shapes. This is a real field for imagination - it will be interesting to see what idea your child will come up with! The set includes a robot and 4 colored markers. The toy is designed for users aged 7 years and older.

Learning through play

The Artie 3000 robot is a great help in learning the basics of coding, geometry, math and analytical thinking. All you have to do is connect it to a computer, laptop or tablet via Wi-Fi, then go to a dedicated website with a user-friendly programming interface. By moving the available blocks, the child can make the robot move forward, backward, left or right, and raise or lower the marker. This will make Artie 3000 draw different shapes and letters! You can also test the created code with the simulator at any time to avoid possible mistakes. What's more, there are 4 modes of play - default shapes, games, coloring and free coding.

Included

Robot4 colored markers
