EDIFIER S880DB speakers

Don't sacrifice high quality sound and choose speakers that deliver an extraordinary listening experience. The Edifier S880DB is a remarkable set of compact speakers that are among the few supported by Hi-Res Audio technology. The titanium tweeter driver delivers high volume, sensitivity and resolution with clear treble. Equipped with a range of inputs makes them high-end equipment.

Wireless playback

Speakers are equipped with Bluetooth function, which allows you to wirelessly connect to devices that support this standard. This is ideal for people who appreciate full comfort when using audio equipment. Just match the device of your choice with the speakers and enjoy your favorite sounds. Choose convenience and forget about tangled cables limiting your possibilities.

Comfortable use

The speakers come with a remote control, which makes the use of the speakers even more comfortable. The remote control allows you to control playback parameters, such as switching on and off or adjusting the volume. Enjoy your entertainment at the highest level and choose functionality.

A variety of useful inputs

Speakers are equipped with a variety of inputs to enhance your enjoyment and use. RCA input is perfect for connecting to audio-video equipment that doesn't have mini jack connector. Optical input allows you to send digital audio signal in very high quality and ensures that there is no interference during transmission, while coaxial input allows you to send electrical signal, so you can count on the highest quality sound without noise and distortion.

Top quality sound

The careful craftsmanship of the S880DB allows it to deliver premium sound. The 19mm tweeters are made from polished titanium laminate material. Deep bass is provided by large midrange drivers with metal diaphragms, and the aluminium frame ensures higher power handling and minimal vibration.

Kit contents:
