Semi-automatic Coffee Machine HiBREW H8A

Meet the HiBREW pressure coffee maker, which combines design elegance with versatile functionality to give you an unforgettable taste experience. Ideal for any coffee lover, it allows you to prepare espresso, cappuccino or latte whenever you feel like it.

Variety in the preparation of drinks

The coffee maker offers the possibility to prepare two sizes of drinks - for one or two cups, making it a perfect choice both for a moment of relaxation in solitude and during gatherings with loved ones. One-click operation ensures automatic and intuitive preparation of the beverage of your choice, and two filter options - for ground coffee and ESE sachets - offer flexibility in choosing your favorite type of coffee.

Thoughtful design

The coffee maker uses an NTC-controlled thermometer to safely heat water to the desired temperature, which translates into ideal conditions for extracting the best flavor. The powerful 19-bar pump, steel boiler and double heating tube also contribute to a perfectly flavored coffee, providing the optimal temperature and pressure needed for a perfect Café Crema.

Easy operation and convenient features

The HiBREW H8A is also equipped with a removable water tank with a practical flap, making it easy to fill and clean. The stainless steel cup warmer and removable drip tray further enhance convenience, while the removable milk container made of antibacterial material ensures hygiene and easy cleaning.

Elegant design and convenience of use

The HiBREW H8A impresses not only with its functionality, but also with its design. Its dimensions (330 x 300 x 230 mm) allow it to be comfortably placed in any kitchen, and the capacities of the water (1.5l) and milk (0.5l) tanks ensure the convenience of preparing multiple drinks without the need for constant refilling.
