Darkflash S21 ARGB active CPU cooling (white)

Create optimal working conditions for your computer's processor. Darkflash S21 active cooling stands out for its excellent performance and offers a TDP of 210 watts. It also provides efficient heat dissipation and excellent airflow. It is also equipped with a fan running at exceptional speed and ARGB colored backlighting. What's more, the cooling is compatible with both Intel and AMD processors.

Reliable cooling system

Forget about the problem of an overheating computer - with Darkflash you can play dynamic games and use demanding programs without worry. The cooling is equipped with copper heatpipes that directly contact the CPU for better heat transfer. The S21 also has 56 aluminum fins. The space between them has been specially optimized to guarantee great airflow. All this translates into maximum cooling performance.

Powerful fan

A powerful fan, which operates at about 800-2000 RPM, is responsible for reliable cooling of the processor. It is equipped with a hydraulic bearing and is distinguished by a service life of up to 40,000 hours - don't be afraid that it will wear out quickly. Also noteworthy is its low volume level, which does not exceed 30.15 dBA - forget about annoying noise! The fan also uses a PWM controller, which adjusts its speed depending on the current temperature.

Stylish design

The cooling features not only performance, but also a stylish, modern design. Laser engraving adds to its original style, while colorful ARGB backlighting catches the eye and allows you to transform the character of your computer. Thanks to this, the S21 model will be perfect in combination with a transparent case - a great way to achieve unique visual effects!
