

Darkflash DR11 ARGB Computer fan

Darkflash DR11 ARGB Computer fan

Ref: 4710343797500

Darkflash DR11 ARGB computer fan

The 9-blade Darkflash DR11 ARGB fan will enhance any computer with unparalleled cooling efficiency and spectacular lighting effects. The product combines modern technology with aesthetics, providing optimal working conditions for advanced computer systems. With its help, you can not only effectively manage the temperature of components, but also give an individual character to your workstation, enjoying smooth operation and reliability at every step. The product ensures stability and works surprisingly quietly (22.5dBA).

Dual light effect

The fan's dual halo rings will not only illuminate the computer's interior, but also create a mesmerizing visual effect that enhances the look of any workstation. The internal and external LED lighting strikingly highlights the cooling dynamics.

Reliable operation

The use of Rifle bearing not only guarantees quiet operation, but also extends the life of the fan. RPM stability and reduced friction are other features that distinguish the DR11 ARGB.

Refined blade design

The fan's 9 blades are designed to optimize airflow, increasing cooling efficiency while reducing the noise generated. This allows you to

use your equipment comfortably and safely.

Compatibility and ease of installation

The Darkflash DR11 ARGB was created with ease of installation in mind - so it guarantees quick and simple integration with most cooling systems. Its universal design fits a variety of PC configurations, making it a versatile choice for everyone.

Reliable stability

The fan is equipped with anti-vibration pads that reduce potential vibrations, thus ensuring quiet operation and stability. The high-quality square frame with sharp edges further enhances balance. So you can focus on entertainment or work without any distractions.

Smart Control PWM

Thanks to the PWM function, the DR11 ARGB fan adjusts its speed according to the current needs of the system, allowing you to effectively manage airflow and reduce power consumption. In standby, the product maintains a low speed to help save energy.
