Filter ND1000 K&F Concept for DJI Mini 4 Pro

Ref: 6942052514859

K&F Concept ND1000 filter for DJI Mini 4 Pro

Make it easy to create breathtaking shots with your DJI Mini 4 Pro drone. The ND1000 filter by K&F Concept will give you fantastic image quality and is great for very bright, sunny days. It features a durable, lightweight design and is very easy to install - in no time you'll attach it to your lens and get ready to record!

Great visual effects

The ND1000 filter offers 10-stop light reduction and is ideal for recording in very bright light, such as on sunny days. It allows you to achieve long shutter speeds, which works well, among other things, when filming subjects in motion, such as waterfalls and more. Now you can easily achieve the results you dream of!

Carefully considered design

AGC optical glass was used for the filter, which translates into its durability and guarantees excellent image quality. The accessory has also been coated with a multi-layer coating, which prevents it from scratching and settling water, dust or other contaminants on it. In addition, the lightweight aircraft aluminum alloy frame means you don't have to worry about the drone's flight stability or the proper operation of its gimbal.
