## ESC Hobbywing XERUN XR8 Pro G2 - Black

Ref: 6938994408622

ESC Hobbywing XERUN XR8 Pro G2 - Black

Hobbywing XeRun XR8 Plus G2S Regulator

The Hobbywing brand regulator will prove its worth in any race. It stands out for its incredibly efficient and fast performance, and with nearly 30 customizable parameters, you can easily set it up to serve you best. Gain access to the most important information in the dedicated app and use the Full-Sensored mode. The IP5X protection rating allows you to use the product in almost any environment.

Unmatched performance

Enjoy enhanced performance. Paired with a compatible Hobbywing motor, the XR8 Plus G2S controller can take advantage of Turbo Timing technology. However, it doesn't stop there! When paired with Hobbywing G3 4268 or 4274 motors, the unit also supports Boost up to 48 degrees, providing efficiency increased by 50% over the previous model, the G2. This is your new way to gain an edge!

Wireless capability and convenient access to data

Get full control. The OTA programmer (sold separately) and Hobbywing HW Link app allow you to program parameters wirelessly, as well as download and install updates. They also provide convenient access to critical information. The real-time data logging function allows you to check throttle, voltage, amperage, temperature or RPM in real time, among other things. Note: due to the limited Bluetooth range, the function works at a distance of up to about 5 meters.

## Instant operation

Thanks to the new communication protocol, you can adjust parameters and update software faster. When you pair the controller with an LCD programmer, the device provides up to twice the transmission speed. And when you pair the XR8 Plus G2S with an OTA programmer, it will be as much as 3-4 times faster. (The kit does not include programmers).

## Reliable protection

You don't have to worry about the safety of your appliances either. The regulator is equipped with a reverse voltage and reverse polarity battery protection circuit. In addition, special thermal protection protects the capacitor from explosion and overload.

## Additional improvements - Full-Sensored mode and BEC switch

The regulator is designed to operate in Full-Sensored mode whenever paired with compatible Hobbywing motors, such as the 1:8 scale G3 series. Moreover, the built-in BEC mode switch with a maximum output current of 15 A and a configurable voltage in the range of 6-8.4 V (in 0.1 V increments) allows the regulator to be used with a wide variety of standard or high voltage servos.

## Free parameter adjustment

Customize the regulator to your expectations. You can adjust as many as 30 parameters, such as PWM throttle frequency, braking frequency, and Boost/Turbo Timing, for example. All this allows you to precisely adjust the selected settings to your driving style and to the race track surface.

## Reliable electronic switch

The device is equipped with an advanced electronic On/Off switch. Its housing makes it waterproof and dustproof. Forget about the problems characteristic of most standard mechanical switches - the XR8 Plus G2S will surprise you with reliable operation.

## Dustproof

The controller is IP5X rated. This means that it is resistant to dust - they pose little threat to it. So you can use it almost anywhere without worry. It doesn't matter what environment the race takes place in - you don't have to worry about the safety of your device.

Product name
XeRun XR8 Plus G2S
Product number
30113304
Scale
1:8
Continuous / instantaneous current
200A / 1080A
Power supply
2-6S Lipo
Output
BEC
Mode switch:
6V/8.4V,6A; continuous/peak current: 6A/15A (mode switch)
Input cables
Black- 11AWG-200mm *2
Output cables
Black- 11AWG-200mm *3
Input connector
None
Output connector
