Flashlight Nitecore TM03, 2800lm

The Nitecore EC30 is a compact flashlight that you can always have at hand. Despite its small size, it stands out with exceptional performance, producing light with a brightness of up to 1800 lumens. It is made of aerospace-grade aluminum alloy and is highly durable. It also offers several lighting modes to choose from and is very easy to operate. It is distinguished by its IPX8 waterproof rating and reverse polarity protection. The package also includes practical accessories such as a clip and flashlight holster.

The Light You Need

The flashlight is equipped with a CREE XHP35 HD LED, which has a lifespan of up to 50,000 hours. This allows it to provide a brightness of up to 1800 lumens, a maximum beam intensity of 12,100 cd, and a range of up to 220 meters. Now you can easily provide optimal lighting in almost any situation! The device also utilizes PDOT technology. Furthermore, the light generated by the flashlight is safe for the eyes and does not flicker.

Various Lighting Modes to Choose From

Adapt the flashlight's operation to your needs. The EC30 model offers 5 levels of brightness - turbo, high, medium, low, and very low. You also have a choice of 3 special modes - strobe, SOS, and beacon. But that's not all! The device also supports tactical and daily modes. The first allows for quick switching to turbo brightness, and the second to strobe. This allows you to quickly blind a potential

attacker or attract attention and ask for help.

Up to 310 Hours of Runtime

To power the flashlight, a single 18650 Li-ion battery is sufficient, which can provide a runtime of up to 310 hours (in very low light mode). You can also use two CR123 or RCR123 batteries. The built-in indicator will provide you with information about the current voltage of the battery or accumulator. Note: When using CR123 / RCR123 batteries, the turbo mode is not available. Batteries and the accumulator are not included in the package.

Always at Hand

The length of the flashlight is only 111.5 mm, and it weighs only 65.5 g. Thanks to this, you can always have it with you - it will easily fit in a backpack or even in your pocket. Convenient device operation is provided by the side button - you can easily use it even with gloves on. The included accessories are also noteworthy. The holster will provide you with quick access to the device, and the clip will allow you to attach it to your shirt or pants pocket.

Even More Features

The flashlight features a magnetic tail cap that allows you to conveniently attach it to a selected metal surface, such as in a garage. Its additional advantage is the integrated ATR technology, which adjusts its operation based on the environmental conditions. This ensures that the device reliably performs in various situations! The flashlight is also very durable - even a fall from a height of up to 1 meter will not pose a threat to it. It is also distinguished by its IPX8 waterproof rating, so you can immerse it to a depth of up to 2 meters and use it in rainy conditions without worry.
