Active cooling for the processor Darkflash ICE600 PRO

Darkflash ICE600 PRO active CPU cooling

The DarkFlash ICE600 PRO CPU cooling is a high-performance CPU cooler that combines advanced thermal management with an aesthetically pleasing design. Utilizing six heat pipes and direct contact technology on the aluminum base, the ICE600 PRO provides optimal thermal conductivity and instantaneous dissipation of excess heat from the CPU.

Quiet operation with high performance

The ICE600 PRO is equipped with a 120mm ARGB fan. It operates between 900-1600 RPM, providing high cooling performance while maintaining a low noise level of only 25.6 dBA. This gives you peace of mind that even under intense load your computer will run quietly and efficiently.

Synchronization with popular RGB ecosystems

The cooling works with major RGB ecosystems, offering not only performance, but also the ability to personalize your PC with striking backlighting. Compatibility with AURA, RGB Fusion, Mystic Light Sync and Polychrome SYNC technologies allows you to easily synchronize lighting with other components to create unique visual effects.

Included

ARGB fan x 1
Rear mounting plate x 1
AMD mounting screws x 4
Spacers for AMD x 4
Intel mounting screws x 4
Distances for Intel x 4
Mounting clips x 2
Tube of thermal paste x 1
