Aigo AP360 computer water cooling (black)

The Aigo AP360 is water cooling that will satisfy the needs of the most demanding users. It offers unparalleled PC system cooling, quiet operation, easy installation and spectacular ARGB lighting effects to enhance any computer setup.

Unparalleled performance

The AP360 from Aigo is a high-performance water cooling system with a three-year manufacturer's quality warranty that features a cascading fan design. This system not only provides efficient cooling, but also catches the eye with dynamic ARGB lighting, giving you the ability to personalize your gaming setup and workstation.

Unparalleled cooling technology

The AP360 cooling has been built with robust materials and is designed to meet the highest standards of durability and performance. The water pump uses quiet ceramic bearings, while the tubes, with a durable braid, prevent leakage. A pure copper base with a copper content of more than 99%, combined with precise micro-channels on the surface, guarantees the best heat conduction and rapid heat dissipation from the CPU to the heatsink.

Efficiency and quiet operation

The AP360 fans, which can rotate at up to 1800 RPM \pm 10%, providing airflow of 73.59CFM and pressure of 2.025MM H2O, are responsible for exceptional cooling performance. Despite their power, they are incredibly quiet, generating a noise level of only 40.0dBA, so users can enjoy coolness without acoustic disturbances.

Easy installation and cable management

Cascade AP360 fans are designed for ease of installation, allowing for quick installation and efficient wire management, a great advantage over traditional fan configurations. The single-line electrical installation saves time and space in the chassis, allowing for quick and efficient setup.
