Filter Freewell Handheld Split Kaleidoscope

Ref: 6972971862342

Freewell manual kaleidoscope filter

Freewell's Prism Series Manual Kaleidoscope Filter is a tool for creative photographers and filmmakers who want to add unique character and color to their images. It works best in the focal length range of 35mm to 85mm and with lenses with apertures of 2.8, 2 and 1.4. It allows you to manually control light and depth of field to achieve multiple refractions of light. This gives you a kaleidoscope effect, dividing the image into multicolored and multidimensional fragments that adds dynamic and artistic dimension to your photos and videos.
