### Talking Planetary Projector 360 Lexibook

The 360 Lexibook Planetary Projector will become a personal guide to constellations and the cosmos that will transport anyone into the heart of the universe without having to leave home. This educational toy for children ages 8 and up provides an interactive experience and effects that will spark the imagination of any little astronomer. It requires 3 AA batteries (to be purchased separately) to power it. The set includes an educational booklet.

### A starry spectacle

Become a witness to breathtaking spectacles that you can observe from your own bed. The device recreates stars, constellations and even cosmonauts, transforming the space of your choice into a space theater - you can enjoy up to 24 different images!

### Journey through the galaxy with narration

The projector offers the function of narrating the constellations. The narration, conducted in both Polish and English, is filled with interesting facts that enrich your knowledge about the planets, the universe and astronomy. The included booklet further supports the learning process.

### Ease and safety of use

The device was designed with safety and ease of use in mind. Its sturdy design and easily accessible buttons mean that even the youngest users will use it with ease.

#### Sleep in starlight

A practical timer allows you to set the running time of the device, so it will automatically turn off after 15 or 30 minutes. As a result, the projector will be perfect for nighttime, wrapping the child to sleep with a gentle light.
