Freewell VND Magnetic Filter Kit 62 MM

The Freewell 62mm VND Magnetic Filter Kit is currently the most versatile VND system on the market, providing access to a range of features to achieve desired effects in any conditions. Easily reduce light (VND2-5, VND6-9), eliminate reflections (CPL), or achieve a misty effect (VNDXMIST2-5, VNDXMIST6-9, GLOW MIST). High-resolution optical glass with an 18-layer multi-coating ensures impeccably clear images, while the sturdy magnetic construction ensures stability and reliability. Additionally, the extended range from 2 to 9 stops gives full control over the amount of incoming light. The kit also includes a magnetic quick-swap mechanism and a protective case.

Key Features

Freewell filters stand out for their wide range of applications. The kit includes VND2-5 and VND6-9 filters, allowing precise control over the amount of light entering the camera. The VND6-9XMIST filter combines variable light attenuation with a mist effect, offering incredible artistic possibilities. The CPL filter eliminates reflections and enhances colors, while the GLOW MIST filter gives shots a delicate look. But that's not all - you'll also have the VND2-5XMIST filter, combining variable light attenuation with a mist effect, and ND32/CPL, which reduces light and ensures vivid colors. An additional advantage is compatibility with the Freewell magnetic system, meaning you can expand it with additional filters and create a hybrid system that further enhances your creative possibilities. Experiment and achieve the effects you've always dreamed of!

20 Functions

The Freewell Variable ND 62mm Magnetic Filter Kit opens up many possibilities and creative solutions, providing unlimited control over light and effects. It offers up to 20 different functions. You'll get ND filters with various light attenuations, CPL for eliminating reflections, and MISTXND with a mist effect. For example, the ND 9 f-stop filter reduces light by 9 stops, allowing for longer exposure times or more controlled exposure. The CPL filter helps eliminate reflections and enhances color saturation. The kit also includes filter combinations, including ND32/CPL.

Sturdy and Magnetic Construction

The filters are built on a solid frame made of metal using CNC technology, ensuring durability and reliability. The accessories are equipped with a magnetic quick-swap mechanism, allowing you to quickly and conveniently change filters, even when working individually. This is especially useful in dynamic situations. Now the entire filter kit is available in one system, and you can easily switch between them while recording. You no longer have to interrupt your work or waste valuable time on complicated filter mounting and dismounting. The Freewell solution provides full control and freedom during creation.

Included in the Kit

- Filters (VND2-5/CPL, VND6-9/ND32-CPL)
- Base VND Filter
- Base MISTXVND Filter
- Magnetic Frame
- Lens Hood
- Microfiber Cleaning Cloth
- Protective Case

Manufacturer Freewell

Model FW-62-MAGVND

Filter Thread Size 62 mm (2-5)

Material Metal, Optical Glass

Outer Diameter (Base Ring + VND Base Ring + Filters from 2 to 5 stops) 79.05 mm

Thickness 9.75 mm

Weight (Base Ring + VND Base Ring + Filters from 2 to 5 stops) 60 g

Weight (Base Ring + VND Base Ring + Filters from 2 to 5 stops + Lens Hood) 88 g

Preço:

€ 148.01
