Coospo BK9C cadence sensor

The Coospo BK9C cadence sensor is a reliable tool for any cyclist, providing accurate real-time cadence measurement without the need for magnets. With Bluetooth 5.0 and ANT+ technology, an advanced motion algorithm and compatibility with a variety of devices, the BK9C allows you to monitor and analyze your riding performance, helping you improve your performance and take your cycling experience to the next level. Choose the Coospo BK9C and enjoy even better cycling workouts!

Real-time cadence measurement

The BK9C offers accurate real-time cadence measurement, allowing you to monitor your pedaling rhythm and adjust your training intensity. With built-in dual meters, the BK9C achieves better precision and stability without the need for magnets.

Bluetooth 5.0 and ANT+ technology

Equipped with Bluetooth 5.0 and ANT+ technology, the BK9C is compatible with fitness apps, GPS bike computers and smartwatches. Seamless connectivity allows you to monitor cadence while riding and analyze data after a workout to help you perform better.

Advanced motion algorithm

The BK9C uses the latest motion algorithm to provide accurate cadence data even on rough roads. So you can rely on accurate cadence

readings regardless of road conditions.

Full user experience

The Coospo BK9C cadence sensor is equipped with an elastic mounting strap that ensures a hassle-free installation and prevents loss of the sensor while riding. With a battery life of up to 300 hours, you can enjoy long-lasting performance. The thin and lightweight design (8.6g and 8.5mm thick) minimizes the impact on your driving comfort, while the built in LED indicator provides information on the device's status. In addition, the IP67 waterproof rating provides resistance to rain and sweat, making it ideal for use in any conditions.
