FLYFUN - 20A V5

The FLYFUN - 20A V5 speed controller is a versatile device designed for both aircraft models and helicopters powered by alternating current (AC). Its constant current is 20A, and its maximum peak current reaches 30A, which guarantees reliable in-flight performance. The regulator is compatible with LiXX batteries (2-4 cells) and is equipped with a 5.2V, 2.5A current BEC, which allows stable power supply for on-board electronics. Its compact dimensions (25 mm long, 15 mm wide, 5 mm high) and light weight (13 g) make it ideal for installation in models with limited space. The FLYFUN - 20A V5 supports unidirectional control, has a brake function and is programmable, allowing customization of parameters. The lack of sensor inputs simplifies the design and operation.
