

## Set of 4 filters Sunnylife MCUV, ND8/16/32 for DJI Avata 2

Ref: 5906168434815

Set of 4 filters Sunnylife MCUV, ND8/16/32 for DJI Avata 2

Sunnylife MCUV set of 4 filters, ND8/16/32 for DJI Avata 2.

Create fantastic bird's eye shots even in unfavorable lighting conditions. A set of dedicated ND (ND8/16/32) and MCUV filters by Sunnylife for the DJI Avata 2 drone will help you! With them, you'll give yourself more flexibility in exposure control and effortlessly achieve stunning results. They are also distinguished by their sturdy yet lightweight design. The set also includes a practical box that will allow you to conveniently transport and store the filters.

Refined in every detail

Sunnylife filters are extremely lightweight - each filter weighs only about 0.7 g. So they won't overburden your drone or affect its flight stability! Made of optical glass and PC - they are not only durable, but also provide excellent image quality. The multi-layer coating guarantees excellent light transmission, while protecting the surface of the filters from water, greasy stains and scratches. What's more, the accessories don't interfere with the use of the drone's original gimbal cover, and installation is extremely easy and fast.

Create even more beautiful shots

Unfavorable lighting conditions will no longer be an obstacle for you. ND filters will allow you to better control exposure by reducing the amount of light reaching the camera's sensor. Thanks to them you can also improve color saturation - now your shots will impress with vivid, clear colors! With their help you will also get the original motion blur effect. In turn, the included MCUV filter effectively reduces

blue tones and increases light transmission - great for example, when recording in the mountains.

Included

ND8 filter ND16 filter ND32 filter MCUV filter Filter storage box
