

## AnyCubic DLP Craftsman Resin (White)

AnyCubic DLP Craftsman Resin (White)

Ref: 6974662350886

AnyCubic Craftsman DLP Resin (White).

Experienced creators are well aware that not only the parameters of a 3D printer matter, but also the material used to create models. AnyCubic Craftsman resin has been created for DLP printer users who require special precision in detail. It is an ideal choice for professionals looking for materials with long durability and high print quality. It will be perfect for the production of fine components, collectible figures and precise technical prototypes. The resin is distinguished by an extended lifespan of up to 1.5 years. This is a significant improvement over other resins on the market, which typically have a lifespan of about a year.

Innovative composition with Nano-Ceramics

AnyCubic Craftsman will enhance the quality of the end result. It contains a photosensitive resin with the addition of nano-ceramics, which ensures better light scattering inside the material. The resin is also distinguished by lower shrinkage - its result is 3.7% compared to 7.1% for other products. All this translates into better precision and smoothness of printed parts. Your models can be as detailed as never before!

Speed and low shrinkage

Thanks to the improved formula, the first exposure to light in Craftsman resin can take only 35 seconds. This is a great result compared to popular resins that require 60 seconds. Subsequent layers cure in just 2 seconds per layer. This printing speed will save you time and

allow you to enjoy greater productivity.
