Smart plug WiFi Sonoff S60TPF

Ref: 6920075740455

Smart plug WiFi Sonoff S60TPF

Sonoff S60TPF WiFi smart outlet.
Bring more convenience to your smart home. The Sonoff S60TPF WiFi socket will allow you to remotely control connected devices using the eWeLink app or voice assistants. With its help you can also monitor energy consumption and create work schedules. The product can easily handle up to 16 A - it will work even for more demanding equipment.

Refined in every detail
Thanks to its compact design, the S60TPF does not take up too much space and does not obstruct neighboring outlets. The product is also equipped with 2 light indicators that will provide you with information about the status of the Wi-Fi connection and power supply. There is also a locking mechanism for safe use in areas where children are present. The outlet has also been protected against short-circuits and lightning, and its housing is made of fire-resistant plastic.

Remote control
The outlet works with the eWeLink app, which will allow you to conveniently remotely operate the devices connected to it. With its help, for example, you can turn on or off the selected equipment, as well as create a work schedule for it. Make your coffee maker or lamp turn on exactly at the time you usually get out of bed! The app also allows you to monitor your energy consumption - eliminate bad habits and start saving on your bills. From its level you can also enable overload protection.

Even more convenient smart home management
Compatibility with platforms such as Amazon Alexa, Goggle Home and IFTTT makes smart home management even easier. Add the Nest to your favorite ecosystem and enjoy convenient control! What's more, the product works with voice assistants (for example, Amazon Alexa), so you can operate your devices with simple commands. You don't even have to move from your seat!

Additional capabilities
The Nest supports eWeLink LAN Control, which means you have the ability to control the devices connected to it without having to make an additional connection to a server. You can also add it to the iHost service and connect it to NSPanel or NSPanel Pro (sold separately). All this gives you even more freedom to manage your smart home!

Create smart scenes
Make your smart home adapt to you. The Nest allows you to create elaborate scenes - just combine it with additional sensors (sold separately). For example, you can set it up so that lights automatically turn on when someone enters a room, and turn off when they leave it. The possibilities are almost endless!
