

## Smart Dimmer Switch Sonoff D1 with RM433R2 remote

Ref: 6920075779929

Smart Dimmer Switch Sonoff D1 with RM433R2 remote

Sonoff D1 smart dimmer switch with RM433R2 remote control

With the ability to set different brightness levels, turn the light on or off, set smart schedules - the switch significantly improves the lighting system in the house. The switch can be controlled with the RM433 remote control, the eWeLink app, Alexa and Google Home.

Ideal solution for children

The switch can be an ideal solution in a child's room. In case our little one is afraid of the dark, the moment he goes to bed, the light can be set to be dimmed to 20-30%, while after a specified time, the light would turn off.

Convenience above all

Depending on your needs, you can remove the remote control from the base, so that without the use of a phone app it is also possible to control the lighting, or leave the remote control in the base and treat it as a simple switch. Using the remote control (can be purchased separately), you can instantly turn off the light without having to tear yourself away from the couch, or set one of 4 lighting levels.

Smart schedules

The switch has two new modes - sunrise mode and sunset mode. Using the app, you can set a schedule in which, as the sun sets, the light in the house turns on, and as the sun rises, the light goes out. For example, you can set a schedule in which at 6 pm the light turns

on at 40%, and at 7 pm the light turns on at 100%, and turns off at 6 am.

#### Multiple ways to control

The device has the ability to be controlled with smart assistants such as Alexa, Google Home Assistant, but also with a remote control or an app that is downloadable for both android and iOS phones. Choose the most convenient method for you and start your smart home adventure today.
