TW Soundpeats H2 earphones

Even better sound quality and greater comfort with Soundpeats earphones. The accessory uses the aptX codec for great sound and reduced latency. The chip along with Bluetooth 5.2 is responsible for a fast and stable connection, and the dual hybrid drivers deliver crystal clear sound. In addition, 4 noise-canceling microphones allow you to talk freely in noisy environments.

Sound quality you need

Soundpeats earphones feature hybrid dual 8 mm drivers. They provide balanced sound, delivering richly detailed sound. Now you can enjoy your favorite tunes in a whole new way.

Low latency

Specially for e-sports enthusiasts, the H2s are equipped with the aptX codec, which delivers high-quality sound. In addition, the low latency of 60ms enhances game dynamics and provides better synchronization between audio and video, even when watching movies.

Stable connection

Don't be afraid of losing signal. The earphones support Bluetooth version 5.2, which together with the Qualcomm QCC3040 chip ensures a fast and stable connection. Plus, the H2's signal range is 10 m, for even more freedom of use.

Long working time and comfortable operation

The earphones can run for about 5 hours on a single charge, and with the charging case, the runtime goes up to 20 hours. To renew the H2's power, use the USB to USB-C cable included in the kit. The accessory is operated via the touchpads on the earphones, so you don't have to reach for your phone to answer an incoming call, stop playback, etc.

High call quality

The benefits of the H2 don't end there! Each earphone features 2 microphones with cVc 8.0 noise cancellation, so you can make calls even in the middle of the urban jungle and not worry about the surrounding noise.
