Intercom EJEAS MS8-S

Ref: 5906168436086

### EJEAS MS8-S intercom headset

The EJEAS MS8-S will prove its worth as a communication tool between a rider, for example, on a race track and an engineer in the service lane. In addition, it will find its use in equestrianism, on the stage, during mountain climbing or at the shooting range. It allows 8 intercoms to connect simultaneously, and the signal range is 7 km. Noise reduction effectively eliminates ambient noise, and Bluetooth 5.1 ensures a stable connection.

### Reliable connection

The intercom uses Mesh 3.0 technology, which allows 8 intercoms to be paired simultaneously. What's more, the maximum distance between 2 people can be 1.8 km (in open space), and for 8 people - 3.5-7 km. For a high-traffic area, the range is 900m.

### Water resistant

Use the intercom in various conditions without worrying about damage. The EJEAS MS8-S is distinguished by its sealed design, so you can use it in the rain without worrying about getting splashed. The product's waterproof rating is IP67, which means you can submerge it in water to a depth of 1 meter.

### Bluetooth 5.1

Talk to others without interference. The intercom uses an improved Bluetooth 5.1 chip, which translates into a fast and stable connection. In addition, you can enjoy lower power consumption - don't worry about charging the intercom too often.

#### Listen to music and make calls

After pairing your smartphone with the intercom via Bluetooth, you can comfortably hold conversations with others. The CVC noise cancellation technology effectively eliminates ambient noise, so you can be sure that your interlocutor will hear you. What's more, with the EJEAS MS8-S you can listen to music - the playback will also turn on automatically within 5 seconds if it doesn't detect a conversation in progress.

#### Included

Headset with intercom Charging cable User manual
