IP Indoor Camera ZOSI C519M WiFi 5G 4MP

ZOSI C519M WiFi 5G 4MP indoor IP camera

The ZOSI C519M indoor IP camera combines exceptional 4MP image quality with advanced features such as automatic motion tracking, two-way audio communication and intelligent object detection. With Solt Light Sensitive technology, the camera adapts to lighting conditions, providing clear images both day and night. Convenient operation via the ZOSI Smart app and the ability to save locally to a Micro SD card make it a reliable tool for home monitoring. ZOSI C519M is an ideal choice for those who value security and modern solutions.

High image quality

The ZOSI C519M camera is equipped with a 4 MP (2560*1440) sensor, which guarantees high image quality, regardless of lighting conditions. The 1/2.7" CMOS image sensor with progressive scanning and the 4 mm lens at F2.0 provide detailed and clear images. Thanks to Solt Light Sensitive technology, the camera automatically switches between day and night modes, adjusting to changing light, allowing night visibility of up to 10 meters.

Full control and visibility

The camera's 1.44-inch screen with 128*128 resolution displays date, time, weather, temperature and humidity, and offers two-way video calibration. It supports up to 5 privacy areas for customization. Automatic white balance, 3D digital noise reduction and digital

backlight compensation ensure the highest image quality in any situation.

Advanced features and ease of use

The ZOSI C519M supports two-way audio transmission for real-time communication with its built-in microphone and speaker. Automatic object tracking and the ability to call a video call using gestures are innovative features that make daily use of the camera easier. The ZOSI Smart app available for Android and iOS and AVSS software for PC and MacBook allow remote control and live video viewing.

Reliability and security

The camera supports standard H.265/H.265+ video compression. In addition, continuous or alarm recording capabilities and local storage on Micro SD card (up to 128 GB), NVR or cloud, give you full control over your recorded footage. A built-in push alarm allows a choice of alarm types such as motion, human detection or intrusion.

Thoughtful design

The camera's power supply is DC 5W/2A (Type C interface), and its maximum power consumption is 5W. The non-waterproof plastic housing is rated for temperatures from -10°C to 60°C and humidity up to 95% (non-condensing). In turn, the compact size (152 × 90 × 90 mm) and lightweight design (285 g) make mounting and setting up the camera extremely easy.
