Redtiger F7NS video recorder

The Redtiger F7NS is an advanced video recorder designed for superior recording quality and comprehensive safety features. Thanks to its state-of-the-art technologies and robust design, the F7NS offers reliability and precise recording of every detail on the road. The camera is also small, making it extremely discreet, and installation is not a challenge.

High video resolution

The Redtiger F7NS allows recording in several resolution modes: Ultra HD 4K 3840 x 2160P at 30 fps, 2560 x 1440P at 60 fps and 1920 x 1080P at 120 fps. It also offers a wide 170° viewing angle. This allows the camera to capture detailed images that make it easy to read traffic signs, license plates and other important elements of the environment.

Wi-Fi support and mobile app

Built-in Wi-Fi makes it easy to connect the camera to a smartphone app. The "Redtiger" app allows you to view live video, playback recordings and manage the device directly from your phone. In addition, you can quickly download recorded files to your smartphone and share via social media.

GPS and super-capacitor

The F7NS camera is equipped with a GPS function that accurately records the location and speed of the vehicle. The ability to view the route on Google maps via the Redtiger app or a dedicated Windows and Mac program provides additional evidence in the event of an accident. The camera is not only accurate, but also extremely durable. The super capacitor used guarantees resistance to extreme temperatures, which minimizes the risk of overheating, significantly extending the life of the device.

Advanced safety features

The F7NS is equipped with a built-in G-sensor, which automatically locks and saves recordings if a sudden shock or collision is detected. A continuous loop recording function automatically overwrites the oldest files when the memory card is full. And the 24-hour parking monitoring mode allows continuous recording while parked, keeping your vehicle safe even when it's parked.
