Redtiger F7NP video recorder

Redtiger F7NP is an advanced recording system that has earned the trust of more than one million drivers worldwide. It consists of two cameras - a front camera and a rear camera, which offer the highest image quality, reliability and a wide range of features to ensure complete safety and security of the vehicle. The compact and discreet design of the F7NP camera makes it easy to install and unobtrusive. The device is also reliable in a variety of weather conditions, guaranteeing stable operation in both extreme cold and hot weather.

Exceptional 4K quality

The F7NP captures video in 4K resolution, allowing it to capture detailed and clear footage. The front camera offers various recording modes: 2160P at 30 fps, 1440P at 60 fps and 1080P at 120 fps. This allows you to accurately read license plates, road signs and other important elements on the road.

Excellent night recording quality

A built-in sensor automatically adjusts the quality of nighttime recording according to the lighting conditions, ensuring clear images even in low-light conditions. The Super Night Vision function ensures that no detail escapes your attention, regardless of the time of day.

Real-time GPS playback

The F7NP saves GPS data on an SD card, allowing you to view your vehicle's route on your phone or computer. With this feature, you can accurately track the route taken, which is extremely useful if you need to analyze the route or provide additional evidence in case of an accident. This tool enhances the transparency and accuracy of the record, offering full control over vehicle location data.

Comprehensive parking lot monitoring

The F7NP offers 24/7 parking lot monitoring, protecting your vehicle 24/7. With G-sensor Trigger and Time-Lapse Mode features, the camera automatically triggers recording when shock or motion is detected, enhancing safety while parked.

G-Sensor Emergency Recording

The G-sensor automatically locks and saves recordings if a shock or collision is detected. This ensures that important evidence is preserved and available for playback when needed.

Control and sharing via the app

Built-in Wi-Fi and a dedicated app allow you to remotely control the camera, view live video and easily share recordings on social media. You can quickly share your recordings with family and friends when needed.
