Redtiger F7N video recorder

The Redtiger F7N is the ideal solution for drivers. The advanced recording device combines high quality 4K video with state-of-the-art features such as night monitoring, parking and more. It provides full protection for your vehicle and recording of events on the road. It is ideal for RVs, SUVs, trucks and buses.

4K and dual-channel recording

The Redtiger F7N offers superior video quality thanks to its two cameras - front and rear - recording in 4K 3840 x 2160P and 1920 x 1080P resolutions, respectively. The wide-angle cameras (front 170°, rear 140°) capture all pedestrians and vehicles around the car, providing essential evidence in case of collisions or other traffic incidents.

Built-in Wi-Fi and GPS

The F7N supports Wi-Fi, which allows easy connection to a smartphone app. With the Redtiger app, you can download videos to your phone and share them on social media. The built-in GPS, on the other hand, records your route, speed and other information that can prove crucial as evidence in case of emergencies.

Super quality night recording

The camera is equipped with an advanced sensor that improves light sensitivity in low-light conditions. The combination of a large F1.5 aperture, high quality lenses, and WDR and HDR technology provides clear images at night, eliminating the need for an additional light source. Now you can easily check license plates or other details of interest.

Reliable features

The Redtiger F7N can automatically monitor a vehicle's surroundings 24 hours a day. The built-in G-sensor detects sudden bumps or collisions, automatically locking and saving recordings as evidence. The loop recording function is also extremely useful. It automatically overwrites the oldest files when the memory card is full, ensuring continuous recording, protecting you in case of unforeseen accidents.

Included

F7N 4K camera
GPS mount
1080P rear camera
3M tape
Electrostatic stickers x 2
