IP Outdoor camera with solar panel DEKCO DC8L

DEKCO DC8L outdoor camera with solar panel

With the DEKCO DC8L outdoor camera, you can enjoy peace of mind knowing that your home is protected 24 hours a day. It can record in 3MP resolution, offering fantastic quality at any time of day. The included solar panel provides power independence, allowing the camera to operate continuously without frequent charging. Thanks to its IP65 protection level and robust design, it is ideal for use all year round, guaranteeing reliability in all conditions. The two-way audio function allows you to interact with people within the camera's range.

Excellent image quality

The camera offers 3MP (2304 x 1296p) resolution, making every detail clear and crisp, regardless of lighting conditions. With a frame rate of 15 frames per second, the image is smooth, which is crucial for both daytime surveillance and nighttime monitoring.

Effective motion detection with PIR technology

Passive Infrared Sensor (PIR) technology is a key component for effective motion detection. The PIR sensor works by registering changes in ambient temperature, allowing it to detect movement of people, animals and vehicles. It has a range of 8 meters, providing a wide detection area, eliminating accidental triggers and increasing alarm accuracy. With this advanced technology, you can be sure that the camera responds only to relevant events, minimizing unnecessary notifications.

Seamless communication

Support for two-way audio means you can not only hear what's going on around the camera, but also talk to those around you. This is ideal not only for security monitoring, but also for daily interaction with family or guests.

More possibilities with the app

The DEKCO app is an indispensable tool for managing the DC8L outdoor camera. It allows you to view the camera's image on your smartphone in real time from anywhere in the world. What's more, the app provides instant notifications when the camera detects motion within its range, allowing you to quickly respond to any unwanted events. You can also use it to personalize settings and remotely control the camera's functions, giving you full control over the security of your home.

Take advantage of solar energy

The DC8L camera was created with simplicity of installation and use in mind. Utilizing Wi-Fi connectivity and a solar panel, installation of the device is extremely simple and fast, eliminating the need to pull cumbersome cables and use external power sources. What's more, thanks to solar power, the camera can operate continuously for long periods of time, offering not only reliability, but also energy savings.

Flexible data storage

The DEKCO DC8L allows you to conveniently and securely store recorded footage, giving you full control over archiving important data. Support for microSD memory cards of up to 128GB allows you to record and store long video sequences without having to delete files frequently. DEKCO cloud storage is also available, allowing easy access to footage wherever you are.
