

## Tail light Magene L508

Tail light Magene L508

Ref: 6971606841103

### Tail light with radar Magene L508

The Magene L508 tail light is an advanced device that combines lighting and radar functions. Developed with cyclist safety in mind, it provides detection of vehicles approaching from behind while alerting drivers to the presence of a cyclist on the road. With multiple light modes and advanced features, the Magene L508 is ideal for anyone who values safety and comfort while cycling. The light is distinguished by its IPX7 protection rating, which means it is perfect for riding in any weather.

### Multifunctional light modes

The Magene L508 light offers seven different light modes, including steady mode, flashing mode, pulsating mode, peloton mode, fast flashing mode, rotating mode and radar-only mode. This allows you to customize the lighting to suit different driving conditions and preferences for optimal visibility and safety.

### Wide viewing angle

The light's viewing angle is 220 degrees, providing excellent rear and side visibility. Visibility reaches up to 1.2 kilometers, effectively warning oncoming vehicles and increasing your safety on the road.

### Advanced radar functions

The radar built into the Magene L508 light can detect vehicles from up to 140 meters away. With a detection angle of 40 degrees, the device provides full coverage of the area behind the cyclist, eliminating blind spots and providing protection even on curves.

#### Intelligent brake warning

The light is equipped with an acceleration sensor that detects braking and automatically puts the light into high intensity mode for 3 seconds. This immediately informs drivers behind the cyclist of the braking maneuver, further enhancing safety.

#### Customizing light settings

Once connected to the Magene Utility app, you can adjust the brightness of each light mode, as well as the flashing and pulsing intervals. It is also possible to disable unwanted modes, allowing you to fully customize the light's operation.

#### Automatic switching on and off

The Magene L508 light automatically enters sleep mode after a prolonged period of inactivity, and then turns on when you start driving. This function can be customized in the app to save energy and extend battery life.

#### Long life and fast charging

The Magene L508 light offers different operating times depending on the selected light mode, from 4 hours in constant mode to 19 hours in radar-only mode. Charging is done via a USB-C port and takes about 3 hours.

#### Included

- L508 radar tail light x 1
- rubber straps x 3
- seatpost bracket (with pad) x 1
- user manual x 1
- USB-C power cable x1
- safety strap x 1
