Magene H303 Heart Rate Sensor

The Magene H303 heart rate sensor is a device designed for athletes who want to monitor their heart rate in real time. With cutting-edge technology and high precision, the H303 provides accurate data that can be key to optimizing training and achieving better results. Its exceptional lightweight, comfortable to wear and long life make it an ideal choice for anyone who values quality and reliability.

Advanced heart rate tracking

The Magene H303 sensor uses an advanced ECG signal processing chip that directly extracts heart rate data from the ECG waveform. Thanks to a self-developed algorithm, the device eliminates interference from movement and sweat, providing the most accurate heart rate data.

Compatibility with multiple devices

The H303 supports both Bluetooth and ANT+, allowing it to connect to two devices simultaneously. It can work with cycling computers, sports watches and mobile apps such as Zwift, Strava and Wahoo Fitness, providing versatility and easy integration with existing training equipment.

Long life

Using a CR2032 battery, the Magene H303 offers an impressive lifespan of up to 1,000 hours. This means that with regular use for about an hour a day, the battery will last up to 2.5 years without needing replacement.

Water resistance and durability

The sensor is distinguished by its IP67 waterproof rating, and thus is resistant to dust and immersion in water up to 1 meter deep for 30 minutes. This is ideal for athletes training in various weather conditions.

Lightweight and comfortable

The sensor weighs just 16 grams, while the chest strap weighs 30±1 grams. Thanks to its ergonomic design and adjustable strap, the H303 provides a comfortable fit and does not cause discomfort even during prolonged use. Just focus on your workout and improve your performance!
