

Speed cadence sensor Magene S314

Speed cadence sensor Magene S314

Ref: 6971606840984

Magene S314 cadence and speed sensor

The Magene S314 cadence and speed sensor is the latest, third generation of this type of device, which offers advanced cycling monitoring capabilities. Thanks to its compact size and light weight, the S314 is extremely convenient to use, and its state-of-the-art features make it an ideal choice for both amateur and professional cyclists.

Cadence and speed modes

The Magene S314 allows you to easily switch between cadence and speed modes using the Magene Utility app or by reinstalling the battery. This gives you the flexibility to adapt the device to your training needs.

Compatibility with various devices

The S314 sensor supports both ANT+ and Bluetooth 5.0 protocols, allowing it to connect simultaneously with various devices such as bicycle computers, smartphones and sports watches. This allows you to monitor your performance on multiple platforms and apps, such as Garmin, Wahoo, Zwift, Strava, TrainerRoad and many others.

High accuracy and reliability

The use of a third-generation algorithm and a state-of-the-art motion chip ensures precise data, eliminating interference from uneven

terrain. This guarantees the accuracy of measurements, which are crucial for analysis and performance improvement.

Long battery life

The sensor is equipped with a CR2032 battery that provides up to 500 hours of operation. This means that the device will last for a long time without the need for frequent battery changes, which is especially important for those who regularly train outdoors.

Weather resistance

With an IP66 waterproof rating, the Magene S314 is dustproof and water resistant, which means you can use it in harsh weather conditions without worrying about damage.
