Hikvision C8 Pro WiFi 4K video recorder

The Hikvision C8 Pro video recorder is an advanced device that provides the highest quality recordings and maximum safety on the road. Equipped with the latest technology, it is ideal for drivers who want to record every moment of their journey with unprecedented precision and detail.

Crystal image quality

The Hikvision C8 Pro video recorder captures images in an amazing 4K resolution (3840x2160P), which ensures exceptional clarity and detail in the recordings. With a wide 113° horizontal and 136° diagonal viewing angle, it captures everything going on around you, eliminating blind spots and increasing your safety. The large F1.75 aperture allows you to capture clear images even in low-light conditions, which is invaluable when driving at night.

Intelligent voice recognition

With the Hikvision C8 Pro, you can control the video recorder with simple voice commands, such as "Snapshot", "Recording on", or "Recording off" (the feature does not support Polish). This innovative solution allows you to fully control the device without taking your hands off the wheel, which significantly increases driving safety. Now you can fully focus on the road, knowing that you are in full control of the recorder.

Advanced ADAS features

Equipped with ADAS advanced driver assistance system, the Hikvision C8 Pro video recorder warns you when you change lanes, exceed the speed limit, and lets you know that the car in front of you has moved. These features not only increase your safety on the road, but also help you avoid potential collisions and fines.

Reliability and functionality

Thanks to the built-in G-Sensor module, the video recorder automatically starts recording if a collision or strong shock is detected. The Hikvision C8 Pro supports TF cards with a capacity of up to 256GB, allowing for long-term recording without the need to frequently empty the memory. The overwrite function automatically deletes the oldest recordings, providing space for new files. However, you can configure the G-Sensor settings so that they are not overwritten, ensuring you can access them when you need them.

Easy transfer and management of recordings

The WiFi module in the Hikvision C8 Pro video recorder allows you to easily transfer recordings to your mobile devices. With the smartphone app, you can manage recordings, view them in real time and configure device parameters. This extremely convenient solution allows you to quickly share recordings and easily manage all functions of the video recorder.

Easy installation and operation

The Hikvision C8 Pro is designed for easy installation and use. The plug-and-play installation and automatic recording when power is turned on make the device ready to use in a matter of moments. A user-friendly interface, a convenient 2.45-inch IPS display and easy controls ensure everyday convenience.

Included

- Car camera × 1
- Charger × 1
- Power cable × 1
- Electrostatic film × 1
- Instruction manual × 1
