GameSir K1 wired controller

Enjoy exceptional precision during gameplay. The GameSir K1 controller uses advanced Hall Effect technology and features a transparent design with RGB backlighting. Thanks to its high compatibility, you can use it with various platforms, including Xbox Series X/S, Xbox One X/S, Steam and Windows 10/11.

Hall Effect

GameSir K1 uses Hall Effect technology, which provides incredible precision and durability. The controller's analog sticks have a lifespan of up to 5 million cycles and eliminate the drift problem commonly found in other controllers. Analog triggers with 0.1mm accuracy offer precise control, especially useful in racing games where every move counts.

Convenience while playing

The X, Y, A, B buttons on the GameSir K1 controller are responsive and softly cushioned for comfort during long gaming sessions. Each button provides a lifespan of up to 5 million clicks and an activation force of 60 ± 10 gf, which translates into reliability and a pleasant gaming experience.

Realistic experience

Thanks to haptic technology, the GameSir K1 controller offers a realistic and immersive experience. Vibration makes every game more engaging and exciting. The ability to customize lighting effects and vibration modes with GameSir Nexus software allows the controller to be fully personalized and tailored to the player's individual preferences.

Multifunctional M button

A special M button allows you to quickly switch between different functions. It can be used to change the trigger mode between hair and linear, giving you more control depending on the type of game. In addition, this button allows you to adjust the lighting effects and backlight brightness, so you can customize the look of the controller to your liking.

Quick Profile Switching

With the quick profile switching feature, you can easily adjust the controller's settings for different games. GameSir K1 allows you to save and quickly switch between three different profiles, which is extremely useful when switching from one game to another. You can have separate settings for racing games, shooters and adventure games.
